Assignment

Date: 29th November 2021

Time duration: open.

Create a REST Api using NodeJS with the following features

1. Authentication (using username and password)

2. The code should have create, edit, update and delete functionality for users.

3. Forget password api

Create an Express application to show the following screens using bootrstap

1. Login using API

2. Manage users, should add user, delete, edit and disable user from login

3. Forget password, it should send a link to user's email(which is used at time of signup)

user should use that unique link to reset password.

4. Link should expire in 10 min. if expired, user should resend link using forget password.

Notes

1. Code should be well documented

2. Once done, push it to public repo on GitHub or gitlab and provide us url to check.

3. Steps to deploy in readme file.

4. Exception Handling, validation should be used and best practices should be used we've done so far.
